Antonino Sommariva was awarded a “Laurea in Ingegneria Elettronica” (summa cum laude) from the University of Palermo (Italy). Then, he joined the Centro per la Ricerca Elettronica in Sicilia (Monreale, Italy), where he was appointed Head of the Microwave Department. Thereafter, he was with the Istituto di Elettrotecnica ed Elettronica of the University of Palermo as an Assistant Professor, and later with the Dipartimento di Elettronica per l’Automazione (now Dipartimento di Ingegneria dell’Informazione) of the University of Brescia (Italy) as an Associate Professor. He is now a Full Professor at the same University. His teaching focuses on the field of circuit theory, whereas his main research interests focused at first on perturbation methods for the analysis of weakly-nonlinear oscillators, and then on the unresolved problems of Classical Circuit Theory.

Selection of the main publications on international journals.
